APPLICATIONS BUILT

Active Stay, Front-end Developer (1 of 5)

[\(deployed link\)](#)

A travel application geared toward hiking and staying fit while away from home. The app routes through several API's to display weather data, a map and the top hikes close to the user's entered destination.

Run Tracker, Back-end Developer (1 of 4)*

[\(deployed link\)](#)

A full stack application that allows users to sign up and enter their workout information into the app to be stored and see graphical representations of their workout history displayed via d3.js. This application utilizes several web technologies including: JavaScript, Node, Express, Sequelize, and MySQL database.

Bamazon, Sole Developer

[\(link to repo\)](#)

A command line interface for an online sales company that navigates customers through a local storefront. The application utilizes Node.js with the NPM inquirer and mysql packages along with a MySQL database.
